Memo to File

RE: Portland Cement Co. of Utah
Little Mountain Mine
DOE/045/005
Tooele County, Utah

On March 19, 1984, Tom Tetting, Pam Grubaugh-Littig and Lynn Kunzler met on site with R. K. Kronstadt, Jim Lake and Bud Bouer of Portland Cement and Barry Formo, Building Inspector for Tooele County.

Currently the Little Mountain Mine is producing between 125,000 to 200,000 tons a year of Limestone. This tonnage is produced during a three to four month period during the year. This operation will be expanding to five to six acres (it is probably more than two acres presently) and therefore, will no longer meet the DOE criteria of Section 40-8-4 UCA 1953. A pre-design conference will be arranged in the near future with the Department of Environmental Health with a permit application (MR-1) being filed with DOGM shortly after. The operator will also file for a special use permit from Tooele County by April 2, 1984.

This project should be handled by either the A or B team at this point. Upon team designation, the pre-design conference will be set up.

Lynn Kunzler
Reclamation Biologist
